**Would like to
introduce you to our**

“WT5000”

***Water
Tanker/Wagon***

Introducing the WT5000 Water Tanker/Wagon which was built to work in conjunction with the JPH Equipment Pty Ltd's CT Series Compost/Windrow Turners.

The WT5000 is constructed with a sturdy steel frame, with wide low impact tyres and has a heavy duty 5000 litre poly tank, which has a water level indicator.

This combination of CT compost/windrow turner and the WT5000 allows you to add water and additives to the windrow during turning and at an ideal and precise rate to achieve the maximum efficiency of composting.

Then WT5000 also has rear connections to add a sprinkler bar (not included) thus giving the WT5000 yet one more function that it can perform.

The JPH Equipment CT Series Compost/Windrow Turners are designed with an offset towing arm specifically designed for the WT5000, turning this to a "one tractor – one person" operation saving time and fuel.

It also features a 7 hp high pressure fire fighting pump and plumbing for fast change over for both suction and pressure. This is done through the 50mm flexible suction hose and 2" BSP cam lock fittings.
